

PRESSEMITTEILUNG • PRESS RELEASE

Alanod-Solar braves the crisis

Dislocation of sunselect[®] production to Ennepetal and upgrading of service

Our top quality products are nowadays sold, processed and installed by our partners on all five continents. As first enterprise in the world we have reached the milestone of more than 10 million squaremeters of sold absorption-surface (solar thermal) and thus delivered our contribution to the reduction of CO₂ in a size of at least 1 million tons p.a.

Alanod-Solar continuously upgrades their worldwide service for the solar absorptive- and reflexion product range.

Therefore the production at the Lauenförde-location will be moved to the Alanod-Solar headquarters in Ennepetal as at 31.12.2009.

The PVD line of Lauenförde will be relocated to Ennepetal and integrated in the machinery of Alanod-Solar GmbH & Co. KG for further manufacture of sunselect[®]-products.

All places of employment of the location Lauenförde can be integrated and secured at the headquarters in Ennepetal.

With this action Alanod-Solar optimizes both production and logistics of their product sunselect[®] and grants an improved service to their customers.

Concentrating the state-of-the-art technologies at the location Ennepetal means for Alanod-Solar to set further impulses for the improvement of their solar products and corresponding new developments. The completely equipped research- and development department at Ennepetal will considerably contribute to this target.
